

Grace tests random numbers with 10-sided dice – what does “random” mean?

If you toss a 10-sided die ten times, will you get each number once? Will the numbers be in a certain order?

Toss the die ten times and write down the numbers you get. If any are missing, write them in the last box.

Do *all* the numbers show up when you toss the die ten times? Or are there *always* some missing numbers?

First toss	Second toss	Third toss	Fourth toss	Fifth toss	Sixth toss	Seventh toss	Eighth toss	Ninth toss	Tenth toss		What numbers are missing?

First toss	Second toss	Third toss	Fourth toss	Fifth toss	Sixth toss	Seventh toss	Eighth toss	Ninth toss	Tenth toss		What numbers are missing?
